

ContentProtect Security Appliance

CP 100 Product Details

The powerful ContentProtect Security Appliance CP 100 use the latest technology to drive and correlate WAN Optimization and Unified Threat Management; delivering unprecedented Network Analytics - for faster, more accurate business decisions.

Maximize the Performance of Limited Resources

The ContentProtect Security Appliance CP 100 makes it easier for small organizations and branch offices to optimize network and application performance, even with very limited resources. ContentProtect Security Appliance CP 100 scans deep into the packet payload to quickly identify non-critical and detrimental traffic and then prioritizes mission-critical traffic based on your organization's objectives. By ensuring mission-critical traffic gets through, ContentProtect Security Appliance CP 100 maximizes the performance of networks with even the most limited resources.

Comprehensive Control in One Efficient Device

The ContentProtect Security Appliance CP 100 delivers unified threat management and WAN optimization in one device, eliminating the latency and complexity caused by implementing multiple single-purpose appliances. Its revolutionary Network Analytics makes it easy to see and report on user activity, application performance and threat control by showing how isolated events impact performance as a whole. The ContentProtect Security Appliance CP 100 generates granular reports on a specific user, prioritizes branch applications and stops spyware, viruses, inappropriate content and more with one clear interface.

Easily Manage Distributed Environments

The ContentProtect Security Appliance CP 100 makes it easier for administrators to manage distributed environments. Specifically designed for branch office and small office implementation, the ContentProtect Security Appliance CP 100 reports usage in real-time and allows administrators to quickly identify and control the users, applications and threats that impact network performance. Additionally, with the ContentProtect Security Appliance CP 100 in the branch and another ContentProtect Security Appliance at headquarters administrators can easily optimize WAN or VPN connections.

Specifications

Model	CP 100
Capacity	
Web Requests	120,000 requests/hour - 2Mbps HTTP Requests
Maximum IP hosts	75
Maximum IP flows	120,000
Client Requirements	
Browser	IE 6.0 or higher, Firefox 1.0 or higher
Interfaces	
Network Interface	10/100/1000 RJ45 - 2 ports
Console Ports	Male DB-9 RS232 - 1; RJ45 10/100 - 1
Additional Features	
Device Management	DB-9 Console Port; HyperTerminal RJ45 Console Port; Web GUI, SSH/Telnet
Hardware Dimensions	
Height	1U
