Visibility. Security. Control.

The CP Security Appliance FEATURES:

VISIBILITY

- Complete Traffic Visibility™
- Application Traffic (including Layer 7)
- Web 2.0 Content
- Users/Group/Device Activity
- Web, P2P, Anonymous Proxy Traffic
- Malware Threats
- Traffic Trends
- Active Reporting with Multi-Correlation of Data
- Bandwidth Usage Reports

SECURITY

- Complete Traffic Protection™
- Anonymous Proxy Guard™
- Zero-day Threat Protection
- Triple Layer URL / Web 2.0 Filtering
- Malicious Web Site Blocking
- Web 2.0 Infected Site Detection
- Spyware Removal

CONTROL

- Complete Traffic Management™
- Internet Traffic Acceleration/Optimization
- Dynamic Application/Bandwidth Shaping and Allocation
- Web Content Prioritization
- Web Category/URL Shaping
- Web 2.0 management

"You don't have to choose between high performance and value, thanks to the ContentProtect Security Appliance."

- Kevin Ko
Yorkland School Principal

HOW CONTENTWATCH CAN HELP YOU

Schools face a unique set of challenges in providing safe, efficient Internet access for students and faculty. The high risks involved with CIPA compliance, inappropriate content and the hassle of poor Internet performance make complete Internet control essential. The ContentWatch CP Security Appliance is the only solution built specifically to provide administrators with the complete visibility, security and control they need to keep students safe and productive.

Complete URL Control

The Internet is constantly changing. Millions of URLs are created monthly and combined with the latest techniques in filter avoidance create a challenge for traditional filtering solutions. Gone are the days of URL content being delivered via HTTP over Port 80. ContentWatch's Complete URL Control takes URL filtering to the next level by combining database look up, key word, dynamic content inspection with Layer 7 application recognition and content control technologies to create the industry's leading URL filtering and content control system. For schools, this means more accurate filtering and fewer security breaches.

Acceptable Use Policy Enforcement

When a student is accused of inappropriate Internet use, do you have the tools you need to immediately resolve the situation? With the CP Security Appliance visibility into Internet activity is unparalleled. You'll be able to easily see what content was accessed for any time period. And, to prevent any inappropriate Internet use, the CP Security Appliance eliminates the risks of anonymous proxies and other filter-bypass technologies.

Bandwidth Reclamation

Are there rogue servers or machines, or recreational use that are using up bandwidth which is slowing down your network or causing you to look at buying more? ContentWatch will help you reclaim bandwidth saving you \$1000's of dollars. With the CP Security Appliance you can easily identify traffic generated by machine, port and protocol. The CP Security Appliance also allows you to control the bandwidth available to each machine on your network - making it easy to shut down Internet access to infected machines.

Visibility into How Your Internet Connection is Used

Internet usage isn't only limited to browsing activity. In schools, valuable bandwidth is also required for streaming video, FTP file transfers, operational systems and more. Without visibility into how these applications are impacted by the traffic generated by recreational applications or even rogue users, administrators can't gather the most accurate information about their Internet performance. With the CP Security Appliance administrators can see, in easy to communicate reports, how every traffic source impacts overall performance - making it easy to solve the problems faced on a daily basis.

About ContentWatch

ContentWatch produces the industry's leading Secure Web Gateway device, the CP Security Appliance. The Security Appliance is the only secure web gateway from the ground up to deliver deep-packet control technology specifically to meet the needs of small and mid-sized networks. Because of its deep-packet control architecture, the CP Security Appliance addresses issues with both web content and web application traffic - providing administrators unparalleled visibility, security and control over how and when the Internet is used. ContentWatch is also the proud maker of Net Nanny

The CP Security Appliance's unique interface makes it easy for administrators to quickly identify and control Internet use issues.

Education

The right fit for any network

Product	Internet Speed	Network Interface	User License Range	Content Filtering	Performance Control	SSL Acceleration
CP 200	5 Mbps	10/100 RJ45, 2 port	25-350	✓	✓	
CP 300	10 Mbps	10/100 RJ45, 2 port	100-5000	✓	✓	
CP 350	20 Mbps	10/100/1000 RJ45, 2 port	100-50000	✓	✓	✓
CP 450	45 Mbps	10/100/1000 RJ45, 2 port	100-50000	✓	✓	✓
CP 550	100 Mbps	10/100/1000 RJ45, 2 port	100-50000	✓	✓	✓
CP 650	200 Mbps	10/100/1000 RJ45, 2 port	100-50000	✓	✓	✓
CP 750	500 Mbps	10/100/1000 RJ45, 2 port	100-50000	✓	✓	✓
CP 1000	1 Gbps	10/100/1000 RJ45, 2 port	100-50000	✓	✓	✓

Reinvent Your Relationship with the Internet.

The CP Security Appliance is ready to offer you new levels of Internet safety, performance, and control, so you can maximize the value and productivity of your Internet connection. Visit www.contentwatch.com to learn more and schedule a live demo.
